

## **Catch Up Funding**

This year this is being used to support the delivery of small support group sessions in Mathematics and English. This is in addition to the standard lessons delivered to all students and therefore provides the additional focused support enabling students to catch up by making accelerated progress, whilst embedding and over learning basic concepts.

This strategy has been successful in previous years and has therefore been repeated. Statistical evidence is linked to success in the subject area and cannot be attributed solely to these additional support sessions. However, the increased confidence, engagement in learning and self-esteem of these students is clear to see and contributes hugely to the accelerated progress that has been noted.
